Overall SEO Health — Needs Work

Category Scores

Meta Tags & Title
8/10
Good defaults, per-page metadata

Structured Data (JSON-LD)
1/10
Zero schema markup

Image Alt Text
2/10
23 images with empty alt=""

Sitemap
7/10
Present but flat priorities

robots.txt
9/10
Clean, allows all, sitemap ref

Open Graph / Twitter
8/10
Root-level only; per-page missing

Heading Structure
7/10
H1 per page, minor issues

Performance (Code)
7/10
WebP, next/image, priority hero

Accessibility (a11y)
6/10
Empty alts, otherwise decent

Internal Linking
8/10
Footer + nav provide solid equity

Canonical URLs
3/10
No canonical tags on any page

PWA / Manifest
6/10
Manifest exists, wrong icon

Critical Issues

1. 23 images with empty `alt=""` — SEO + Accessibility fail

All decorative hero backgrounds use `alt=""`. While technically correct for pure decoration, several are not purely decorative (e.g., branch office photos). Every image with content meaning needs a descriptive alt.

Files affected: `hero-section.tsx`, `footer.tsx`, `about/page.tsx`, `contact/page.tsx`, `air-freight/page.tsx`, `ocean-freight/page.tsx`, `branches/page.tsx`, `faq/page.tsx`, `pickup/page.tsx`, `claim/page.tsx`, `check-price/page.tsx`, `volumetric-calculator/page.tsx`, `currency-converter/page.tsx`, `privacy-policy/page.tsx`, `terms-conditions/page.tsx`, `refund-policy/page.tsx`, `prohibited/page.tsx`, `not-found.tsx`, `freedom-section.tsx`, `about-section.tsx`, `track/page.tsx`, `track/[trackingNo]/page.tsx`

CRITICAL Impacts both Google Image Search and WCAG compliance

2. Zero structured data (JSON-LD)

No `Organization`, `LocalBusiness`, `BreadcrumbList`, `FAQPage`, or `Product` schema anywhere. This is the single biggest SEO gap — Google cannot show rich results (snippets, FAQ carousels, local packs).

Priority schemas to add:

- `Organization` on homepage
- `LocalBusiness` with `branch` on `/branches`
- `FAQPage` on `/faq` and `/track` (inline FAQ)
- `BreadcrumbList` on all pages
- `WebPage` with `SearchAction` on `/track`

CRITICAL Rich results = higher CTR from SERPs

3. No canonical URLs

No `<link rel="canonical">` on any page. Without this, tracking URLs with query params (`?q=...`) and `/track/ABC` vs `/track` can create duplicate content issues.

CRITICAL Duplicate content dilutes page authority

High-Impact Issues

4. Per-page OG/Twitter cards missing

Only the root `layout.tsx` defines `openGraph` and `twitter` metadata. Every sub-page layout defines `title` and `description` but no `openGraph` images or Twitter card overrides. Shared links from `/track`, `/about`, etc. will show the generic hero image.

HIGH Social sharing = referral traffic

5. Dynamic tracking pages are client-rendered

`/track/[trackingNo]` is `'use client'` with no `generateMetadata()` or `generateStaticParams()`. Google can't index individual tracking pages with meaningful titles (e.g., "Track ABC123 — Gajan Traders"). Add `generateMetadata` for dynamic meta.

HIGH Dynamic meta = indexable tracking pages

6. Sitemap priorities are flat

All routes except `/` have `priority: 0.8`. Services like `/air-freight`, `/ocean-freight` should be `0.9`; legal pages like `/refund-policy` should be `0.3-0.5`.

HIGH Flat priorities = no crawl budget guidance

7. Manifest icon is wrong

`public/manifest.json` uses `/images/hero.webp` (a hero photo) as the PWA icon. Needs a proper 512×512 app icon (logo on solid background).

MEDIUM

Medium Issues

8. No hreflang / alternates

Multi-tenant with Lanka Mahal but no `hreflang` or `alternate` links. If the Lanka app shares the domain, add `<link rel="alternate" hreflang="en-IN" ...>`.

9. `lastModified: new Date()` in sitemap

Sitemap always shows "now" as lastModified. Google may interpret this as spam. Use actual content dates or omit the field.

10. Contact form is non-functional

The contact form does nothing on submit — no API call, no success state. This is a UX + SEO trust signal issue (Google considers functional contact forms a quality signal).

11. No `<noscript>` fallback

All pages are `'use client'`. If JS fails, the page is blank. A `<noscript>` with key content would help older bots and accessibility.

12. Branches metadata says "Mumbai" but offices are in Chennai

`branches/layout.tsx:7` says "Mumbai and across India" but the actual offices (`tenant-config.ts`) are in Chennai. Misleading for local SEO — Google may surface the wrong local pack.
HIGH Local SEO mismatch

Quick Wins — Ordered by Impact

#	Fix	Effort	Impact	Severity
1	Add JSON-LD `Organization` + `LocalBusiness` to homepage + branches	Small	Very High	CRITICAL
2	Add `FAQPage` schema to `/faq` and `/track`	Small	Very High	CRITICAL
3	Fix all `alt=""` → descriptive alt text	Medium	High	CRITICAL
4	Add `canonical` URLs to all layouts	Small	High	CRITICAL
5	Add per-page `openGraph` overrides	Small	High	HIGH
6	Add `generateMetadata` for `/track/[trackingNo]`	Small	High	HIGH
7	Fix sitemap priorities	Small	Medium	MEDIUM
8	Fix manifest icon	Small	Medium	MEDIUM
9	Fix "Mumbai" → "Chennai" in branches metadata	Small	Medium	HIGH
10	Add `BreadcrumbList` schema to all pages	Medium	Medium	MEDIUM

What's Already Good

- WebP images throughout (fast loading)
- `next/image` with `sizes` and `priority` on hero
- `<html lang="en">` set correctly
- Title template `%s – Gajan Traders` (good branding)
- `metadataBase` set for OG URL resolution
- `robots.ts` allows all + points to sitemap
- Sitemap covers all 16 public routes
- Semantic headings (h1 → h2 → h3 hierarchy mostly followed)
- Internal links in footer + nav (4 columns of links)
- X-Content-Type-Options: nosniff security header
- Apple Web App meta configured
- Honeypot field on login form (anti-spam)
- Per-page `title` and `description` on every layout

Pages Audited

Route	Title	Has Meta	Has OG	Issues
/	Track Your Parcel — Live Shipment Status	Yes	Root only	Alt text, no JSON-LD
/track	Track Your Parcel	Yes	No	Alt text, no FAQ schema
/track/[id]	Parcel Tracking	Static	No	Client-rendered, no generateMetadata
